UNITED NATIONS GLOBAL COMPACT

- UNGC is the world's largest and most important corporate sustainability initiative
- follows the vision of an inclusive and sustainable economy built on the Ten Principles and the Sustainable Development Goals in the areas of human rights, labour, environment and anti-corruption & the Sustainable Development Goals (SDGs)
- Provides a unique framework to discuss the equitable shaping of globalization across sectors and borders with various strategies and activities
- The initiative is not a certifiable standard or regulatory instrument, but an open forum to initiate change processes and to share ideas

UN GLOBAL COMPACT OVERVIEW

21,000+
businesses

3,000+
non-business
organisations

170+
countries
UN Global Compact
participants

62+
local networks

100+
million employees

Corporate Sustainability Directive (CSRD)

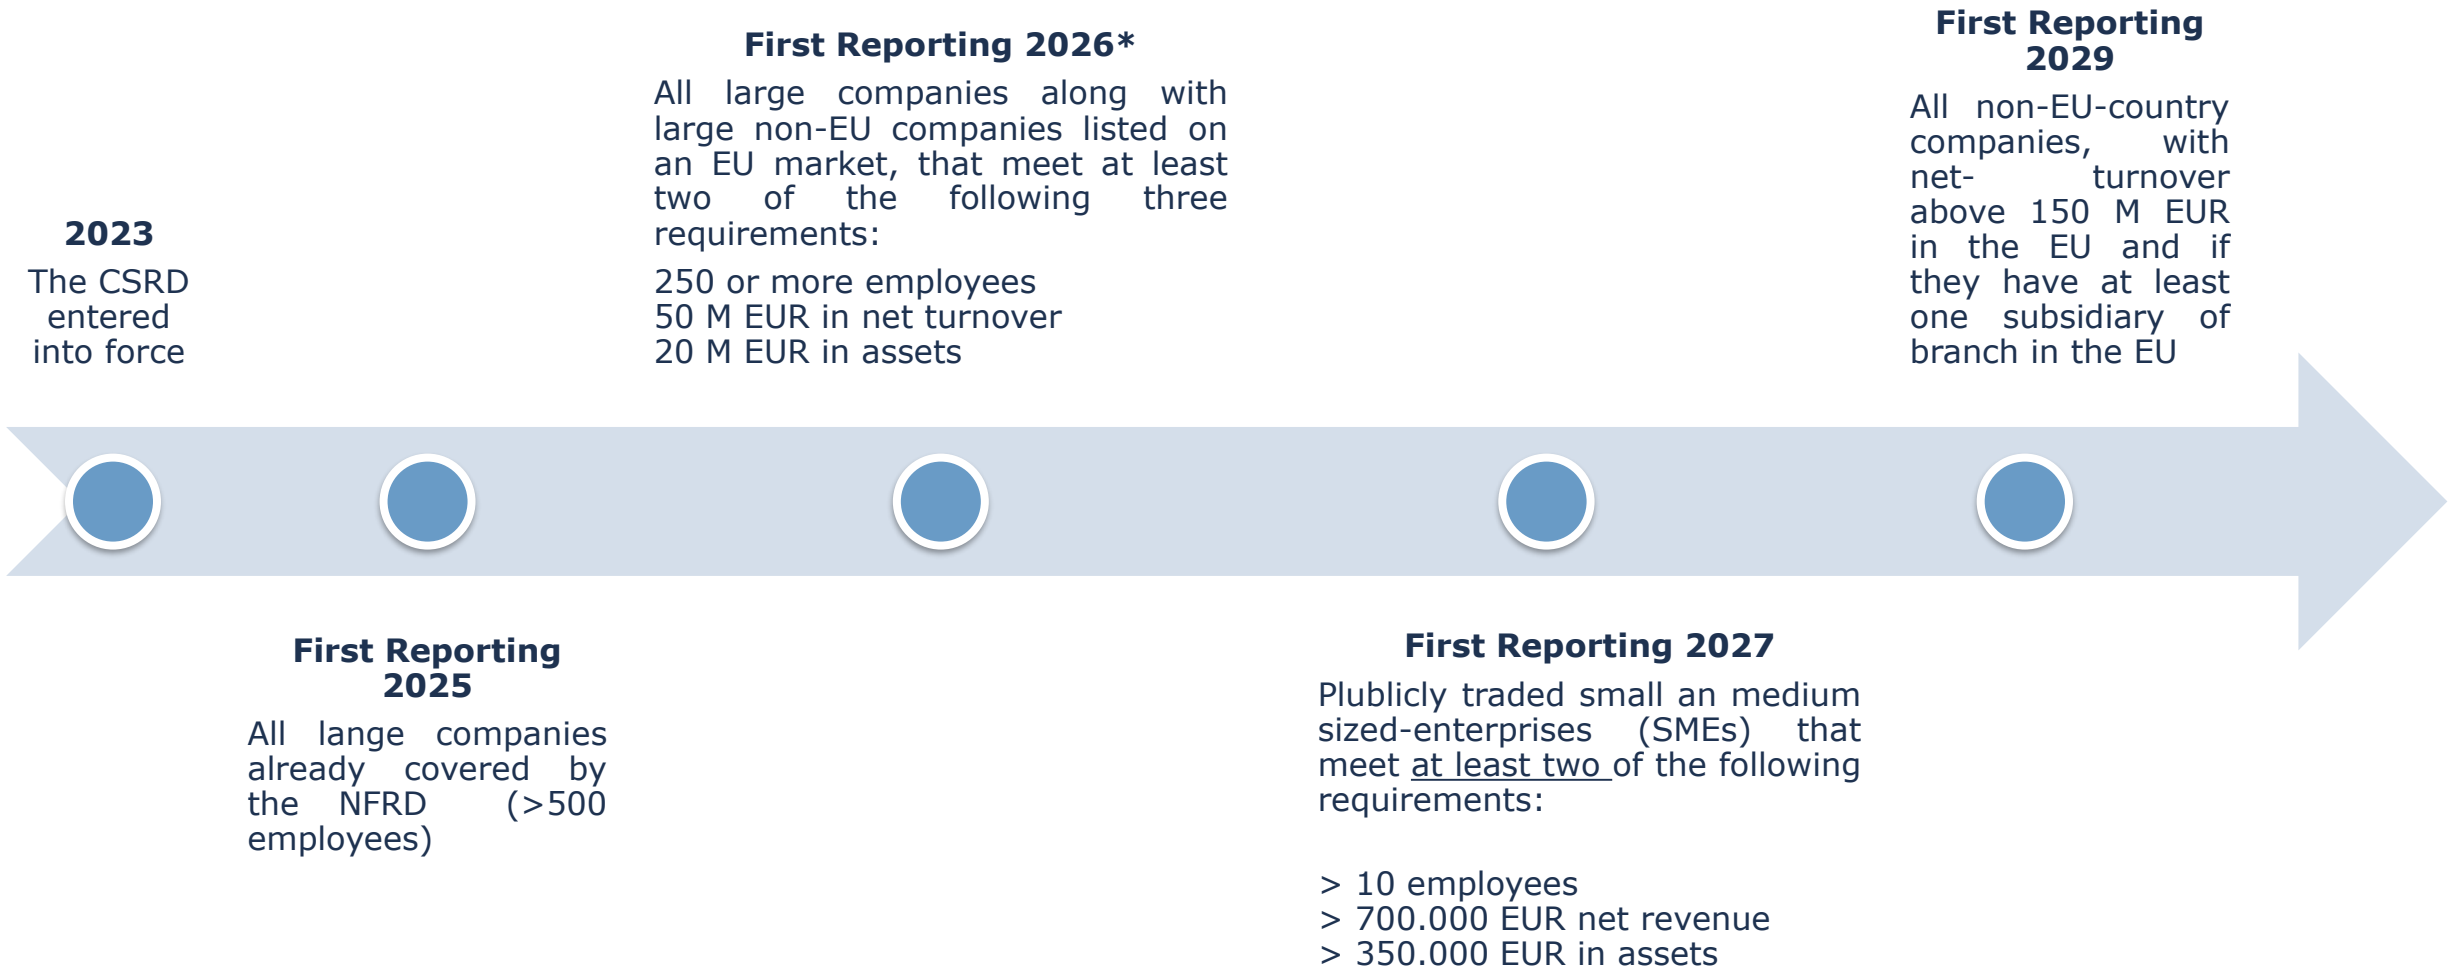

European Sustainability Reporting Standards E1

Key requirements of the CSRD

- **Double materiality:** Companies must analyze their sustainability impact through two different types of materiality, which are how their business impacts people and the planet, and how sustainability and climate change impact their business.
- **ESRS:** Companies must follow the European Sustainability Reporting Standards (ESRS) when conducting their sustainability reporting. These standards cover environmental, social, and governance topics.
- **Third-party assurance:** The CSRD requires companies to provide limited assurance for their sustainability information. This means that an impartial, reliable, and knowledgeable third party must review the data to ensure its accuracy and reliability.
- The information must be a part of the management report and published in a digital format (XHTML).

CSRD Timeline

Relevance for SMEs and suppliers

Observed trends and drivers

- Supply chain pressures (tier 1 and further)
 - Questionnaires with information regarding the sustainability performance (eg. CDP, Ecovadis)
- Market opportunities
- Consumer awareness and the ripple effect of transparency

What actions you can take today to make your business ready for the upcoming changes?

- Educate yourself and your team
- Beginn sustainability monitoring (eg. Scope 1,2)
- Publish your first (imperfect) non-financial report
- Data collaboration with sector supply chain partners
- Engage with stakeholders
- [Communication on Progress of UN Global Compact](#)
- [Voluntary SME ESRS \(draft\)](#)
- Global Reporting Initiative (GRI)

ESRS 1 E1 Climate change

1. General, strategy, governance and materiality assessment
2. Policies, targets, action plans and resources
3. Performance measurement
 1. Energy consumption and mix
 2. Energy intensity per net turnover
 3. Scope 1 GHG emissions
 4. Scope 2 GHG emissions
 5. Total GHG emissions
 6. GHG intensity per net turnover
 7. GHG removals in own operations and the value chain
 8. GHG mitigation projects financed through carbon credits

9. Avoided GHG emissions from products and services

Optional

10. Taxonomy Regulation for climate change mitigation and climate change adaptation

11. Potential financial effects from material physical risks

12. Potential financial effects from material transition risks

13. Potential financial effects from material climate-related opportunities

Taxonomie

Science Based Target initiative (SBTi)

Voluntary public commitment for
carbon reduction

Science Based Target initiative

The Science Based Targets initiative (SBTi) is a **global body** enabling businesses and financial institutions to set **ambitious emissions reductions** targets in line with the **latest climate science**.

Founding Partners

United Nations
Global Compact

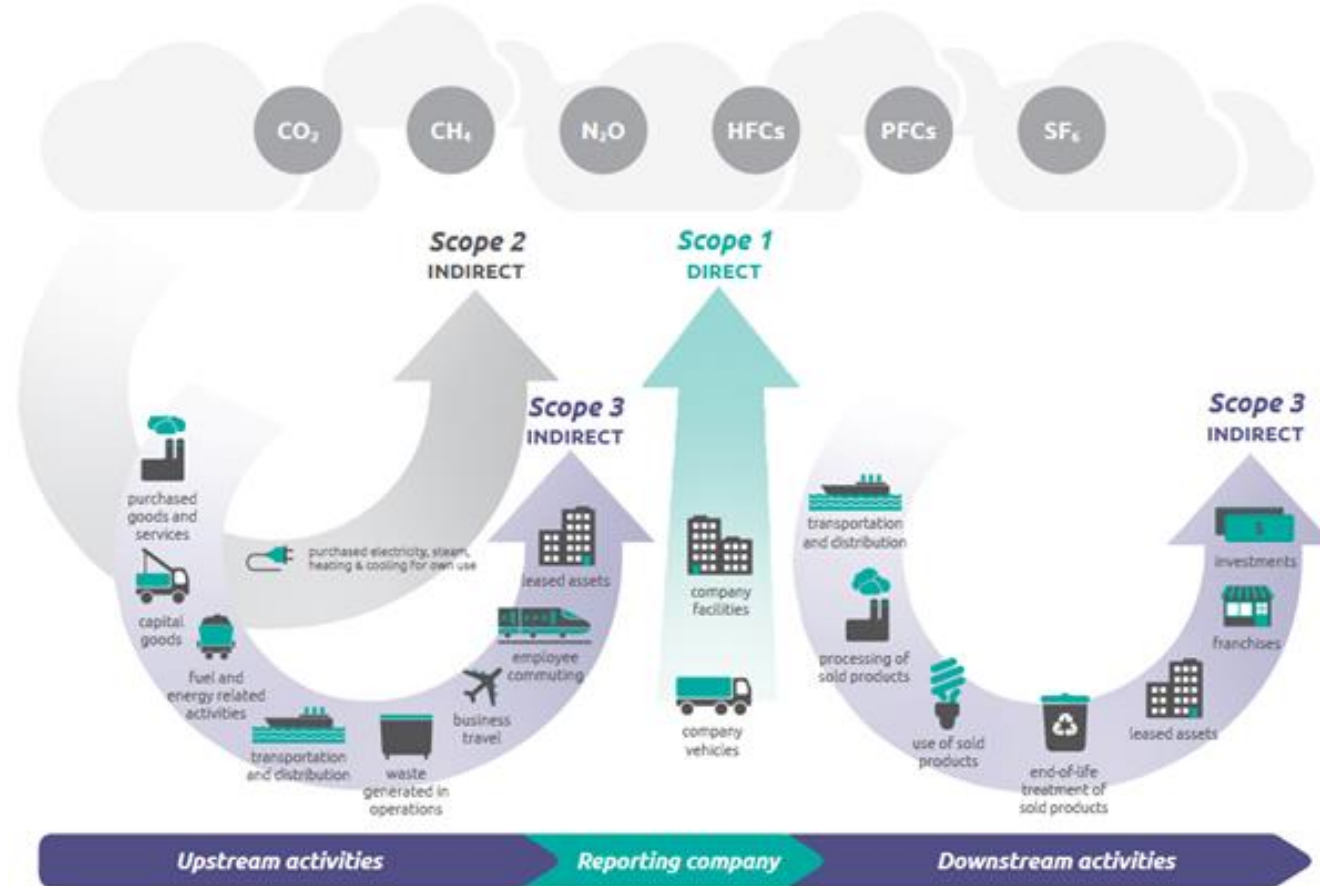

WORLD
RESOURCES
INSTITUTE

In collaboration with

Scopes of climate accounting

Data collection

Metered Activity Data

Utility bills
Fuel and chemical purchases
Mileage reports
Supplier reports
(e.g., purchased goods spend, waste volumes)

Estimated Activity Data

Intensity-based: per square foot,
per unit of production, per revenue
dollar
Company-specific or industry
average

SCOPE 1 ACTIVITY DATA CAN USUALLY BE COLLECTED IN THE FOLLOWING FORMS AND FROM THESE COMMON SOURCES:

Gallons of gasoline
or diesel (*Fuel-
purchase receipts*)

Miles driven
(*Travel records*)

Therms of natural
gas (*Fuel-use
records*)

Gallons of heating
oil (*Fuel-oil
receipts*)

Kilograms of
refrigerant (*Vehicle
maintenance records,
MVAC service
provider, HVAC
service provider*)

SCOPE 2 ACTIVITY DATA CAN USUALLY BE COLLECTED IN THE FOLLOWING FORMS AND FROM THESE COMMON SOURCES:

Kilowatt hours (kWh) of
electricity purchased
(*Electric utility bills*)

Kilowatt hours (kWh) of
heating purchased
(*District heating bills*)

Ton-hours of **cooling
purchased** (*District
cooling bills*)

Pounds (lbs) of **steam
purchased** (*Steam
utility bills*)

SCOPE 3 ACTIVITY DATA CAN USUALLY BE COLLECTED IN THE FOLLOWING FORMS AND FROM THESE COMMON SOURCES:

Spend data for
purchased good and
services (*Procurement
and accounting records*)

Distance and mode of
travel used by
employees for
commuting (*Employee
commuting survey*)

Distance travelled by air
and rail by employees
for business travel
(*Expense records*)

Tonnes of waste by type
and disposal method
(*Service provider records,
Site waste audit*)

Setting an SBT: GENERAL CRITERIA

In order for targets to be approved by the SBTi, they must meet certain criteria:

	CRITERIA
Base Year	<ul style="list-style-type: none">• The SBTi recommends choosing the most recent year for which data are available as the target base year• For targets submitted for validation in 2024, the most recent inventory data submitted must be for 2022 at the earliest.
Target Year	<ul style="list-style-type: none">• Targets must cover a minimum of 5 years and a maximum of 10 years from the date the target is submitted to the SBTi for an official validation
Scope 1 and 2	<ul style="list-style-type: none">• Targets must cover company-wide scope 1 and scope 2 emissions, as defined by the GHG Protocol Corporate Standard• The GHG inventory must include 95% of Scope 1 and 2 GHG emissions• Scope 2 emissions can be reported either as “location-based” or “market-based”, however, the approach must remain consistent when setting a target and tracking progress• Near-term Targets must reduce absolute GHG emissions in line with a 1.5 °C
Scope 3	<ul style="list-style-type: none">• A scope 3 screening must be completed for all relevant scope 3 categories per the GHG Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard• If a company’s relevant scope 3 emissions are 40% or more of total scope 1, 2, and 3 emissions, they must be included in near-term science-based targets• At a minimum, targets must reduce absolute GHG emissions in line with a level of decarbonization required to keep global temperature increase to 1.5°C

SBTi Methodology

1 To set near-term science-based targets:
5-10 year emission reduction targets in line with 1.5°C pathways

2 To set long-term science-based targets:
Target to reduce emissions to a residual level in line with 1.5°C scenarios by no later than 2050

Beyond value chain mitigation:
In the transition to net-zero, companies should take action to mitigate emissions beyond their value chains. For example, purchasing high-quality, jurisdictional REDD+ credits or investing in direct air capture (DAC) and geologic storage

3 Neutralization of residual emissions:
GHGs released into the atmosphere when the company has achieved their long-term SBT must be counterbalanced through the permanent removal and storage of carbon from the atmosphere

4 Required

Recommended

Cross-sectoral guidance

Focus: Near-term targets
Latest version: 5.1

Focus: Target(s) on the path towards achieving net zero emission at the corporate level
Latest version: 1.1

Focus: Targets for SMEs
(simplified route)

SBTi FLAG - Guiding Documents

Sponsor	 GREENHOUSE GAS PROTOCOL	 SCIENCE BASED TARGETS <small>DRIVING AMBITIOUS CORPORATE CLIMATE ACTION</small>
Title	Land Sector & Removals Guidance	Forests, Land, & Agriculture (FLAG) Guidance
Scope	GHG Accounting Guidance	Target-Setting Guidance
Developers	WRI, WBCSD	WWF, SBTi
Status	Currently in <u>draft</u>	<i>Released Sep 2022</i>

The two projects have been funded by the Gordon & Betty Moore Foundation.

Who sets a FLAG Target - Key Features

- FLAG covers **land emissions and biogenic removals**.
- **FLAG targets are separate** from energy/industry targets.
- FLAG offers **options on demand-side and supply-side companies**:
 - Sector approach
 - Commodity approach
- FLAG requires a **no-deforestation commitment**
- FLAG **does NOT include offsets**.
- **These Sectors**
 - Forest & Paper Products
 - Food Production – Agricultural Production
 - Food Production – Animal Source
 - Food & Beverage Processing
 - Food & Staples Retailing
 - Tobacco
- **Companies in any other sector that have** FLAG related emissions totaling more than 20% of the company's overall emissions across scopes 1,2 and 3.

Approaches to set FLAG Targets

Table 5. Typology of FLAG approaches and users

APPROACH	USERS
FLAG Sector Approach <i>Calculate targets for diversified FLAG emissions</i>	<p>Companies with diversified land-intensive activities in their supply chain; companies in midstream and downstream sectors.*</p> <p>Supply-side companies with land-based emissions that are not covered by the commodity approach (e.g., cocoa, coffee, rubber) or with emissions associated with a commodity included in the commodity approach but where emissions from the commodity in question are less than 10% of the company's overall FLAG emissions.</p>
FLAG Commodity Approach <i>Calculate targets for FLAG commodity-specific emissions</i> <ul style="list-style-type: none"> • Beef. • Chicken. • Dairy. • Leather. • Maize. • Palm oil. • Pork. • Rice. • Soy. • Wheat. • Timber & wood fiber. 	<p>Upstream companies with emissions associated with one or more of the available agricultural commodity pathways (except timber & wood fiber) that account for 10%** or more of a company's total (gross) FLAG emissions for each of those commodities <i>may</i> use the commodity pathway for that commodity (but are not required to do so).</p> <p>Companies in the forest products sector or with emissions related to timber & wood fiber that account for 10% or more of their total (gross) FLAG emissions are required to use the commodity pathway for timber & wood fiber.</p>

Table 8. Summary of near-term FLAG pathways

Note: Commodity pathways and the sector pathway may be combined for an aggregated FLAG target. See the FLAG Tool and Methods Addendum for additional details.

NEAR-TERM TARGET PATHWAY NAME	PATHWAY TYPE	UNITS	ABSOLUTE % REDUCTION* (%/YR 2020-2030)
FLAG Sector Approach	Absolute	tCO ₂ e	3.03
FLAG Commodity–Beef	Intensity	tCO ₂ e/t fresh wt	2.40
FLAG Commodity–Chicken*	Intensity	tCO ₂ e/t fresh wt	3.90
FLAG Commodity–Dairy	Intensity	tCO ₂ e/t fresh wt FPCM	3.10
FLAG Commodity–Leather	Intensity	tCO ₂ e/t fresh wt	2.50
FLAG Commodity–Maize*	Intensity	tCO ₂ e/t fresh wt	3.50
FLAG Commodity–Palm Oil*	Intensity	tCO ₂ e/t fresh wt	3.10
FLAG Commodity–Pork*	Intensity	tCO ₂ e/t fresh wt	3.30
FLAG Commodity–Rice*	Intensity	tCO ₂ e/t fresh wt	2.90
FLAG Commodity–Soy*	Intensity	tCO ₂ e/t fresh wt	3.80
FLAG Commodity–Timber & Wood Fiber	Intensity	tCO ₂ e/m ³	2.80
FLAG Commodity–Wheat*	Intensity	tCO ₂ e/t fresh wt	3.60
Mixed Sector Pathway (non-FLAG)	Absolute	tCO ₂ e	4.20**
